Bob:

I nominate Prof. Emmanuel Parzen of Texas A and M University for the Wilks Award. His contributions in the area of exploratory data analysis have been very helpful to the AMMRC staff. At present most experimental data from composite and ceramic materials tests at this installation is initially evaluated using Dr. Parzen's Quantile Box Plot, Quantile Histogram in order to determine acceptance of material preparation and test procedures. Dr. Parzen has been available for consultation (telephone conversation) on a number of occasions resulting in solution to problems beyond our staffs capability. He promptly sends any literature relevant to the prescribed problems. In summation, his promptness and willingness to aid in AMMRC statistical problems is outstanding.

Prof. G. Box, B. Harris and R. Johnson of Wisconsin and Prof. Robert Hogg of Iowa have also provided AMMRC with considerable aid in the following areas: quality control, exploratory data analysis and reliability. It is difficult to select one individual when any one of these gentlemen could equally well qualify for the Wilks Award.

Sincerely,

Don Neal  
Mechanics of Materials Division

Dear Jagdish:

This is a belated answer to your letter of March 31st in which you officially invited me to participate as a voting member of the Army Wilks Selection Committee for the years 1982 and 1983. As I indicated at Raleigh, I am delighted to serve in this capacity, and to help in any way that I can. Thanks again for having invited me.

Cordially,

*Bob*

Tallahassee, FL 32306

Dear Professor Proschan:

I am very pleased to inform you of your selection as the 1982 Wilks Medalist of the American Statistical Association. The presentation of the medal, certificate and honorarium will take place during the 1982 Annual Meetings in Cincinnati at 8:30 p.m. on Tuesday, August 17 in Stouffer's Cincinnati Towers. We hope you can be there in person to accept the award.

Sincerely yours,

Herbert Solomon  
Chairman, 1982 Wilks Committee

SELECTION COMMITTEE GUIDELINES  
FOR

THE WILKS AWARD FOR CONTRIBUTIONS  
TO STATISTICAL METHODOLOGIES IN  
ARMY RESEARCH, DEVELOPMENT, AND  
TESTING

July 1982

COORDINATED BY

THE ARMY MATHEMATICS STEERING COMMITTEE

## BACKGROUND

On December 31, 1980, Mr. Philip G. Rust of Thomasville, Georgia donated \$10,000 to the U. S. Army for the establishment of an annual award to an individual for contributions to Army statistical methodology. The award is to commemorate the late Professor Samuel S. Wilks of Princeton University and is given with the following conditions:

- a) The award must be presented at the annual Army Design of Experiments Conference.
- b) The title of the award must contain the word Army and the name Wilks.
- c) The award is to be given to an individual for contributions to statistical methodologies in Army research, development and testing.

The original bequest has been coordinated with the Secretary of Defense in accordance with AR 1-100. Monies are invested by the U. S. Army Finance and Accounting Center, Department of the Army Financial Operations, Dept. 130/(FINCO-B-D), Indianapolis, IN 46249 (AV 699-3026, Ms. Susan Sullivan) in accordance with the direction of the Chairman, AMSC.

The guidelines given below will be used by the selection committee until changes are issued by the AMSC.

## GUIDELINES

### 1. Name and Purpose of the Award.

a) The award will be called The Wilks Award for Contributions to Statistical Methodologies in Army Research, Development and Testing.

b) The AMSC adopted the following statement as the official basis for the award:

"The Wilks award is given each year to a statistician for his/her advancement of scientific or technical knowledge in Army statistics and contributions to statistical theory."

### 2. Composition of Selection Committee.

a) The selection committee for the "Wilks Award for Contributions in Army Research, Development and Testing" shall consist of five (5) members-- three (3) members from the U. S. Army community and two (2) members from among professional statisticians in the academic or industrial community or from other government agencies.

b) The members and their chairman are to be selected by the Probability and Statistics Subcommittee (PSS) at any scheduled meeting but not later than March 1 preceding the DOE conference.

c) The selection committee is to complete the selection process by August 31.

d) The selection committee appointments are to be for a term of one (1) year; however, members may be reappointed four times for a total appointment period of five successive years.

### 3. Nomination Procedures.

a) Solicitations for nominations for the award should be made through the announcement letter for the Annual Design of Experiments Conference, or any other appropriate method.

b) Nominations for the award may be accepted from anyone at anytime by any member of the committee. The names and all accompanying information should be forwarded to the selection committee chairman by August 1.

c) It is the responsibility of the person making the nomination to furnish the nature and extent of the contributions of the nominee. It is anticipated that this information will be known by the selection committee in the vast majority of cases. The committee will not be held accountable, however, for obtaining this information. This does not preclude a member from doing so, nor does this imply that a member may not make nominations for the award.

d) Individuals, while serving as selection committee members, will not be considered for the Wilks award.

e) Nominees will be considered by the selection committee for two years, and may be carried over for further consideration at the discretion of the committee.

f) Nominees may be employees of the U. S. Government.

### 4. Voting Procedures.

a) The committee chairman is responsible for circulating the names and all pertinent information which he receives relating to the nominations to each committee member by August 15. Each committee member should deliberate privately and forward his or her vote to the chairman by September 1. The results will be circulated to the committee unless any member requests that his vote be kept in confidence.

b) Each member of the committee should vote for three nominees in a priority order; first, second, and third place.

The winner will be determined by first place votes. If this results in a tie, then those tied names will be compared with the vote count extended to first and second place votes. If this results in a tie, the second round winners will be compared with the vote count extended to first, second, and third place votes. If this results in a tie, then the chairman of the AMSC will cast the deciding vote.

5. Reporting Procedures.

a) The selection committee chairman will inform the chairman of the AMSC at least 30 days prior to the Design of Experiments Conference so that the travel arrangements for the winner to attend the conference can be completed and so that the winner's honorarium can be prepared. The AMSC chairman will in turn inform the U. S. Army Finance and Accounting Center at the address given in BACKGROUND section, above.

b) The winner of the award will be formally announced at the annual Army Design of Experiments Conference.

c) The selection committee chairman will inform the chairman of the PSS so that a formal report may be made at the next semiannual AMSC meeting.

6. Amount to be Awarded.

a) The amount of the award is currently set at \$500. If the base amount of the original bequest increases significantly in the future, this amount may be increased. This is accomplished by first notifying the Office of the Secretary of the Army, Gift Fund Office (AV 221-9591, Mr. Feazell). Then the Army Finance and Accounting Center is instructed to transfer money in a specific amount through the Army Research Office, Comptroller (DRXRO-FA). This should not at any time reduce the overall amount below \$10,000.

b) The AMSC, through the PSS, may also present a plaque or medal in conjunction with the award. This may be paid for by the revenues earned by the original bequest. The procedure for coordinating this is the same as in 6a) above.

7. Transfer of Money.

When the annual winner of the award has been chosen by the selection committee, the Army Finance and Accounting Center will be informed so that a check may be written in the proper amount to the winner. The check is forwarded through DARCOM HQ (AV 284-9190/9277, Mr. Kutzer). This person should be contacted and instructed on what the check is for so that no unusual delays are experienced in processing the check at HQ DARCOM.

8. Review and Authority.

In a letter dated June 9, 1981, Mr. Philip G. Rust formally charged the chairman of the AMSC with administering this award with the highest regard for professionalism and in accordance with the original purpose and intent of the award. Mr. Rust feels that the AMSC "is the proper and natural organization for administering the award."

The selection committee will report the name of the winner to the AMSC at the first semiannual meeting following the selection. This may be accomplished through the report of the PSS.

9. Awards Coordination.

This award should not be confused with another award which has a very similar name--The S. S. Wilks Memorial Medal and Award. That award is administered by the American Statistical Association (ASA) and is also based on a gift from Mr. Philip G. Rust. The ASA has asked that the Army selection committee cooperate by not awarding the Army/Wilks award to anyone who has ever received the ASA/Wilks award until a policy can be determined by the ASA and AMSC, jointly.

Info Processing  
Walter Reed Army Institute of Research  
Washington, DC 20012

Dear Doug:

The nominations for the 1982 Wilks Award for Statistical Methodology in Army Research, Development and Testing are enclosed. There are 5 new names and 8 carryovers from last year. I would like to choose the winner a little earlier this year because of the lengthy process time for getting the winner's check through DARCOM HQ. Please try to forward your vote to me by August 12.

I have enclosed a copy of the old Ground Rules and Guidelines for the 2 new members of the subcommittee. I am revising these, but the voting procedure will be the same--vote for first, second and third place.

The new procedure contains a provision for eliminating names from the list before voting. It is Mr. Rust's desire that the winner be an active researcher in statistics who has made an important contribution to the solution of an Army laboratory problem in statistics (or ballistics) or who has developed methodology which is important to Army statistical practice. I believe it would be possible to filter this list to remove any names which obviously do not qualify. This would make our work on voting a little easier. I have accepted all nominations. I would appreciate your thoughts.

Sincerely,

2 Incl

Wilks Award Nominees for 1982

Carryover Nominees

Dr. Marion Bryson, Scientific Advisor, Combat Developments Experimentation Command, Fort Ord, California  
Prof. A. C. Cohen, University of Georgia  
Prof. John Gurland, University of Wisconsin  
Prof. Bernard Harris, University of Wisconsin  
Prof. Boyd Harshbarger, VPI&SU (Retired)  
Prof. J. Stuart Hunter, Princeton University  
Prof. Badrig M. Kurkjian, University of Alabama  
Dr. Clifford J. Maloney, Consultant, Bethesda, Maryland

New Nominees

Prof. Richard Barlow, Berkeley University  
Prof. Robert Hogg, University of Iowa  
Prof. Richard Johnson, University of Wisconsin  
Prof. Emanuel Parzen, Texas A&M University  
Prof. Nozer Singpurwalla, George Washington University

Background of the Nominees for 1982

BRYSON

Methodology: Analysis of dirty data from field experimentations. Formerly Associate Professor, Mathematics and Community Health Sciences, Duke University, 1958-68.

Interactions: Half-time position with ARO-D. Past president and member of the board of directors, Military Operations Research Society. Invited speaker, DOE, 1974. Local host for 23rd and 28th DOE.

COHEN

Methodology: Extensive work in life testing, especially in parametric estimation using censored samples.

Interactions: Invited speaker at 4th and 16th DOE. Also clinical panelist at many DOE conferences and advisor to P&S subcommittee. Coordinator for 3rd DOE.

GURLAND

HARRIS

Methodology: Extensive work in statistical reliability. Author of text in probability. Recently developed new methodologies and optimality results for the long unsolved problem of confidence bounds for system reliability reported at 26th DOE. Work is progressing.

Interactions: Member of the MRC, University of Wisconsin, for approximately 15 years. Clinical panelist at numerous DOEs. Served as advisor to P&S subcommittee and advisor to the DoD Nuclear Systems Reliability committee. Invited speaker at ARO workshop in 1981. Numerous presentations at DOE conference. Local host, 23rd DOE. Many Army interactions.

HARSHBARGER

Interactions: Invited speaker at 6th DOE and invited panel chairman at 14th DOE. Invited panelist at other DOEs and advisor to P&S subcommittee.

HUNTER

Interactions: Invited speaker at 11th, 18th, and 22nd DOE and invited panelist at 6th DOE. Several years as advisor to the P&S subcommittee.

KURKJIAN

Interactions: Chief Mathematician of the Army for approximately 10 years. Coordinated many consulting and research activities in Army labs. Clinical panelist at several DOEs and member of the P&S subcommittee.

MALONEY

Interactions: Chief of the Statistics Branch at Fort Detrick for many years. Invited speaker at the 15th DOE. Chairman of local arrangements for the 5th DOE. Member of the P&S subcommittee for very many years and clinical panelist for several DOEs. Presented paper at 1st DOE and many others.

BARLOW

Methodology: Well known for his extensive work in reliability and applied probability. Co-author with Proschan of Mathematical Theory of Reliability, Statistical Theory of Reliability, and a text on Data Analysis in Reliability (to appear). Also Statistical Inference under Order Restrictions with Bartholomew, Bremner and Brunk.

Interactions: ARO contractor.

HOGG

Methodology: Co-author of Introduction to Mathematical Statistics with A. T. Craig. Well known expositor on statistical robustness.

Interactions: Speaker at 22nd DOE and ARO workshop on robustness, 1980.

JOHNSON

Methodology: Extensive work in statistical reliability. ARO contractor for 2 years (joint with ONR).

Interactions: Invited speaker at 24th DOE.

PARZEN

Methodology: Introduced reproducing kernel Hilbert space methods to spectral analysis of time series. Wrote Modern Probability theory, book on Stochastic Processes, book on time series. Recently developed a complete theory for data analysis based on the quantile function.

Interactions: Invited speaker at 14th DOE and ARO workshop on robustness, 1980. Recent important interaction with USAMMRC, Watertown, in analyzing failure data of composites.

SINGPURWALLA

Methodology: Well known for extensive work in reliability. Co-author of Methods for Statistical Analysis of Reliability and Life Data with Mann and Shafer. Also (to appear) book on time series with T. W. Anderson. Contributed to methodology for analyzing quantile data from kinetic energy penetrators at BRL.

Interactions: Invited speaker at 22nd and 27th DOE, and ARO/ONR workshop on reliability, 1981. Working group on K/E penetrators, 27th DOE meeting. Numerous interactions and discussions with Army personnel, especially BRL statisticians.

BERNARD HARRIS

RESEARCH COMPLETED IN LAST TWO YEARS

A Note on a Difficulty Inherent in Estimating Reliability from Stress-Strength Relationships (with A. P. Soms), MRC TSR #2123 (submitted for publication).

Recent Advances in Statistical Methods for System Reliability Using Bernoulli Sampling of Components (with A. P. Soms), to appear in Proceedings of ARO/ONR Workshop on Reliability Academic Press, Douglas de Priest, Editor).

Improved Sudakov-Type Bounds for Optimal Confidence Limits on the Reliability of Series Systems (with A. P. Soms), to appear.

Bounds for Optimal Confidence Limits for Series Systems (with A. P. Soms) MRC TSR #2093, June 1980, Submitted for publication.

Optimal Upper Confidence Limits for Products of Poisson Parameters with Applications to the Interval Estimation of the Failure Probability of Parallel Systems (with A. P. Soms) MRC TSR #2122, September 1980, submitted for publication.

Additional Results on Optimal Upper Confidence Limits for the Product of Poisson Parameters (with A. P. Soms), to appear.

CURRENT RESEARCH

At present I am completing a report which examines the sensitivity to changes in loss functions of reliability estimates for type II censored exponential lifetime data. The comparisons are made by means of complete asymptotic expansions of the estimators, some of which are expressed in terms of Riemann zeta functions and generalized Riemann zeta functions. This constitutes part of the research outlined in Appendix D-2 of the current contract.

As is evident from the above listing, all of the Technical Reports released during the past two years were in the area of reliability theory and predominantly in the area of systems reliability, a topic which was not mentioned in Appendix D-2 in the previous contract proposal. However, two observations: the role of Sudakov's inequality and some thoughts on potential applications of the notion of Schur concavity, led to significant breakthroughs in this area. One report is in the area of stress-strength models, which was specifically listed as a topic for investigation.

The papers in system reliability listed above provide methods for obtaining confidence limits which are Buehler optimal, for data obtained by Bernoulli sampling on stochastically independent components for a number of ordering functions. The ordering functions, which satisfy the requisite hypotheses of the theorems in the above reports, include many of those traditionally employed in applications such as the natural estimator of the system reliability for series systems. In particular, it is shown that the Lindstrom-Madden technique (commonly suggested in the engineering literature) has nearly optimal properties and is conservative.

PLANNED RESEARCH

The study of the sensitivity to changes in loss functions is to be extended to the case of type I censoring. Additional studies of the properties of stress-strength models are contemplated. These include the use of quantal responses, as well as an investigation of multivariate models. Further, it is known that stress-strength models are often very model sensitive, in that minor perturbations of the stochastic structure may have an enormous effect on the conclusion. Consequently, I have plans to study some failure models that have been constructed for the purpose of determining if these provide an alternative to the use of stress-strength techniques. My present involvement as an advisor to the Nuclear Regulatory Commission has generated interest in the study of common cause failure models and I have constructed a model for such failures and intend to investigate its properties.

BERNARD HARRIS ----

Born: June 20, 1926

Widower - 4 children

Education:

City College of New York	1942-1946	B. B. A. 1946
George Washington University	1950-1953	M. A. 1953
Stanford University	1955-1956	Ph. D. 1958

Additional graduate study at George Washington University, 1954-1955  
and American University, 1953-1954.

Employment:

U. S. Census Bureau	Mathematical Statistician	1950-1952
George Washington University	Instructor (part-time)	1952-1957
National Security Agency	Mathematician	1952-1958
Stanford University	Research Associate	Summer 1957
American University	Lecturer (part-time)	1957-1958
University of Nebraska	Assistant Professor of Mathematics	1958-1961
University of Wisconsin	Associate Professor of Mathematics	1961-1964
	Director of Statistics Division, Department of Mathematics	1962-1964
	Visitor at Mathematics Research Center	1963-1964
	Professor, Mathematics Research Center and Statistics Department	1964-
Technological University, Eindhoven, Netherlands	Acting Associate Director Mathematics Research Center	1972-1973
Technische Universität, München, Germany	Acting Director Mathematics Research Center	Spring 1973
	Visiting Professor Department of Mathematics	Feb., 1970-
	Visiting Professor Mathematics Institute	Aug., 1970
	No Consultant to U. S. Department of Agriculture	1973-1974
	Adjunct Faculty Associate, Boeing Airplane Company	1973-1974
	Consultant to various government and industrial organizations	1973-1974
	Mathematician U. S. D. A. (W.A.E. basis)	1973-1974
		1959-1962
		1961
		1958-1963
		1963-1965

Teaching Activities:

The courses Dr. Harris has taught include Stochastic Processes, Information Theory, Statistical Decision Theory, Mathematical Statistics, Theory of Probability, Matrix Theory, Multivariate Analysis, Advanced Probability Theory, Analysis of Variance, Selected Topics in Graph Theory, Comparison of Experiments, Reliability Theory, Measure Theory.

Other Important Activities:

President	Nebraska Chapter, American Statistical Association 1958-1960
Member	Board of Directors, Amer. Statistical Asso., 1978-1980
Reviewer	Math. Reviews, Reviews I.S.I., Applied Statistics Abstracts, Zentralblatt.
Program Committee	Institute of Mathematical Statistics (Central Region) 1963, 1964, 1973
Program Chairman	Institute of Mathematical Statistics 1966
Special Invited Papers Committee	Institute of Mathematical Statistics, 1967, 1968, 1972
Chairman of Committees planning symposia for the Mathematics Research Center-Fall 1966 - Spectral Analysis of Time Series, Fall 1969 - Graph Theory.	
Member of Program Committee - Symposium on Markov Processes and Potential Theory, Mathematics Research Center, Spring 1967.	
Member of Ford Foundation Committee (1962-1964) studying mathematical training of faculties of Schools of Commerce in midwestern universities and supervising a corresponding summer institute.	
Member - Program Committee 1967, 1969, 1971, 1973, 1975, 1976, 1977 Army Conference on Design of Experiments	
- Program Committee-Symposium on Optimizing Methods in Statistics, Columbus, Ohio, 1971	
Program Committee - Symposium on Classification and Clustering, Wisconsin, 1975.	
C Subcommittee on Probability and Statistics, 1964-1978.	
Methodology Working Group on Nuclear Weapon Reliability Assessment	
Committee on freedom of dissemination of scientific information	1980

Member - AMSC Subcommittee on Probability and Statistics, 1981

Chairman - Subcommittee on Models and Analysis, ASA Comm. on Nuclear  
Regulatory Research 1980-1983.

Member, Editorial Board - Stochastics and Decisions

Dr. Robert L. Launer  
Mathematics Division  
U.S. Army Research Office  
P.O. Box 12211  
Research Triangle Park  
North Carolina 27709

Dear Bob:

This is in answer to your letter of July 21, 1982 concerning the 1982 Wilks Award for Statistical Methodology in Army Research Development and Testing. My votes are as follows:

1. Bernard Harris
2. Nozer Singpurwalla
3. Emanuel Parzen

For the purposes of this award I think that at this time there is a wide gap between Singpurwalla and Parzen. Unfortunately I do not feel too well qualified to vote for the non-academic nominees.

I would suggest that the names of A.C. Cohen, John Gurland, Boyd Harshbarger, and possibly Robert Hogg be deleted from the list; in the case of Hogg there are many in the statistical community who have done more work on robustness than he.

I would like to see the name of Dick Moore added to the list for next year although I am not an appropriate person to nominate him. I believe that he is on the Committee this year in which case I suggest that he be replaced next year by someone such as Malcolm Taylor or Jerry Thomas at BRL so that he will be eligible for election.

Best regards,

Robert Bechhofer  
Professor

Dr. Robert L. Launer  
U.S. Army Research Office  
P.O. Box 12211  
Research Triangle Park, North Carolina 27709

Dear Bob:

My choices for the 1982 Wilks award are as follows:

- 1) Emanuel Parzen
- 2) Bernard Harris
- 3) Nozer Singpurwalla

All three fit in comfortably with Mr. Rust's intent for the award, as do many of the other nominees. It would still be helpful, however, to develop statements differentiating specifically the Wilks award from the Wilks memorial medal and award. Also, a list of previous recipients of both awards would be most desirable. These suggestions are, of course, for your consideration in the future administration of the award.

With kind regards,

Sincerely yours,

*Herb*

Dear Bob:

My selections for the 1982 Wilks Award are:

First choice: Prof. Badrig M. Kurkjian  
Second choice: Dr. Marion Bryson  
Third choice: Prof. Bernard Harris.

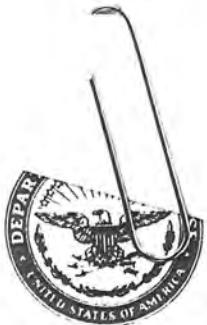

I called my selection in to your secretary today because you are on vacation this week and I'll be on vacation next week and it's the only way I can meet your August 12 deadline.

If you need to get in touch with me next week I will be at Wrightsville Beach, N.C.

I hope you had a pleasant vacation.

Sincerely,

J. RICHARD MOORE  
Chief, Probability & Statistics Branch  
Ballistic Modeling Division

Dear Professor Harris:

It is a pleasure to forward the enclosed check which represents the honorarium associated with the second Wilks Award for Contributions to Statistical Methodologies in Army Research, Development and Testing.

The delay was unavoidable and entirely due to administrative complications. I hope that your personal feeling of honor is not diminished by the delay.

I would like to sincerely congratulate you on behalf of the Army Mathematics Steering Committee and the Subcommittee on Probability and Statistics.

Sincerely,

Enclosure
